Ques 1:

Heterogeneity:

* Increasingly, system are required to operate distributed system across network, that include different types of devices.

* A heterogeneity system is one built using software that could be written different language & operating system.

A system that is built using different software & language and operating system.

Ques 2:

1) The amount of analysis & document that has to be re-done is much less than is required waterfall model.

2) It is much easy to to get customer feedback on development in Incremental rather in waterfall model. We take feedback in the end.

It Increamental development also help in rapid delivery. Customer are able to use and gain value from the software earlier than waterfall process.

Ques 3

Maintainability:
All the # feature are
developed by using github
commit so every from customer
can easily accept.

* Dependability & : Using Email (nu)
Security.   : authentication.
and i have 3 portal no one
access other api. Driver
authentication using "api key"
Security ensure by encrypting password.

* Efficiency: React.js use to extra
dom manipulation is as
frontend.
All api giving accurate
data no extra data
and website is responsive too.

* Acceptability: All kind of exception
are handle and website
can run in all kind of
devices. All three portal
are simple and easy to use.   Driver
Driver App kept more simpler provider.

Ques 4:

Waterfall model applied because the requirement are already known. and system should have to meet all their requirement for development. System is Critical and Sensitive So incremental delivery is not usefull. System is only deployed after complete test.
